# Arrowwood

## *Viburnum dentatum*

### The Honeysuckle Family (Caprifoliaceae)

**Basic Description:** A large shrub or small tree with multiple, erect, arching stems in a loose round shape. The leaves, which are coarsely toothed, opposite and deciduous, turn yellow to wine-red in fall.

**Interesting Facts:** The straight branches were used by Native Americans to make arrows.

**Flower:** White, flat-topped flower clusters are 2-4" across.

**Fruit:** Dark blue berries.

**Wildlife Value:** The dense foliage and berries provide food and cover to songbirds and small mammals. Arrowwood is a source of nectar and pollen for bees, flies and beetles, some of which are predatory and parasitoid insects. It is a larval host of the Spring Azure butterfly.

**Habitat:** Stream banks and moist woods.
